

To ensure the safety and efficiency of electrical installation within the event area, the company has observed incidents of electrical short circuits and safety hazards caused by the use of substandard equipment or improper installation by exhibitors and contractors. These issues may cause serious risks to workers and visitors. To prevent such risks, all exhibitors and contractors are required to strictly comply with the following regulations:

1. All electrical installation must conform strictly to the required TISI standard (in Thailand) without any exception.
2. There are two main power supply circuits: "For Exhibit" and "For Lighting". It is forbidden to misuse the power supply as follows.
 - a. Orders under Section B: Socket/Breaker for Exhibits are allowed for devices such as machinery, engine, TV, Laptop charger, etc. and **not allowed** to apply for all Lighting equipment such as spotlight, LED Ribbon, etc.
 - b. Orders under Section C: Breaker for Lighting are allowed for devices such as Spotlight, LED, Ribbon, etc.
3. The cable of a main power, water, and compressed air supply from the utility hatch, is provided at **2-meters** long. An extension of the length or any relocation are subjected to a surcharge following the price for each equipment.
4. The standard electrical supply is 110V, 220V, or 380V with approximately 10 percent fluctuation. To prevent potential electrical accidents resulting from the use of full electrical load and to ensure a stable voltage supply, exhibitors must bring their own voltage stabilizer.
5. For all electrical usage, it is mandatory to calculate the circuit load with a 20 percent safety margin.
6. It is prohibited for power supply, water, and compressed air wiring equipment to be installed crossing any aisle in the exhibition for safety reasons and not to obstruct traffic for all exhibitors, visitors, and other contractors.
7. A 3-Phase circuit breaker is required to **connect directly** with machinery or engine, otherwise, a **load center** will be required if multi-connection is needed.
8. The company prohibits any equipment installation that causes damage or misuse to our equipment installed for the exhibition.
9. Please beware when installing any equipment or materials. Do not clamp, hang, or place any objects on electrical cables or connection points, as pressure or contact may damage the cable insulation, which could result in electrical leakage to ground, posing a safety hazard or causing a short circuit. If exhibitors need to install graphics or other materials on booth structures where electrical wiring or equipment runs through or is located near the installation area, please inform the service counter staff in advance so that the power supply can be temporarily shut off until the installation is completed.
10. The Electrical Official Contractor reserves the right to disconnect the electrical supply to an installation, which in opinion is deemed as dangerous or likely to cause disturbance to others without prior notice. Exhibitors/contractors will not be entitled to claim any damages both directly and indirectly from any and all parties involved.
